

Bewakoof Friends Pivot oversized tee, run end to end through the Creative Cockpit.

The brand brief filled in, the competitor style report, the angle picker (five proposed, three picked across the trifecta), three on-brand concept briefs with prompts written for every image-gen tool, the prompt deck, and an honest commentary on what worked, what did not, and what I would iterate. Driven against the **deployed Vercel build** with Playwright. Generated with gpt-5.4 via the ChatGPT auth path. **Zero rupees of marginal cost.**

01

The brand brief, filled in

The cockpit asks for six sections, every one of them load-bearing. This is what went in for the Bewakoof Friends Pivot oversized tee.

PRODUCT

NAME	Bewakoof Friends Pivot Oversized Tee
ONE-LINER	Officially licensed Friends merch, sized for the streetwear drop, priced for college.
CATEGORY	Fashion / apparel
PRICE TIER	Value / mass
HERO PHOTO	URL fetched from bewakoof.com <i>(high fidelity)</i>

AUDIENCE

TARGET	Tier 1 and Tier 2 Gen Z streetwear shoppers, 18 to 26, who wear what they watched.
SIGNAL PRESET	Tier 1 Gen Z streetwear
INSIGHT	They want to wear the show and own the joke, not be marketed at.

STRATEGY

SMP	Wear the show. Own the joke.
RTBS	Officially licensed Friends IP · Oversized 240gsm cotton drop fit · Under ₹600, ships in 3 days

BRAND

 #FFCC00 primary 60%	 #0A0A0A accent 30%	 #FFFFFF neutral 10%
---	--	---

TYPOGRAPHY	Bebas Neue (display) + Inter (body)
VOICE	<i>punny</i> not slapstick · <i>rebellious</i> not edgy · <i>confident</i> not hypey

REFERENCES & GUARDRAILS

COMPETITORS	Snitch, The Souled Store, Beyoung + a souledstore.com product URL

ASPECT RATIOS

1:1 Amazon hero · 4:5 Meta feed · 9:16 Reels / Story

MANDATORIES

Bewakoof logo bottom-right · A+ content panel safe zones

FIG 1.1 Step 1 · Brief as rendered on the deployed Vercel build. Auto-fill bar at the top accepts a URL or a brand + product name and populates every field as a draft the human supervises.

The screenshot displays the 'Creative Cockpit' interface for 'Bewakoof Friends Pivot Oversized...'. The top section, titled 'Brief', contains an 'Auto-fill from a URL or brand' feature with a text input field and an 'Auto-fill' button. Below this is a progress bar for '6/6 required fields'. The main section is divided into several expandable cards: 'Product' (Name, one-liner, hero photo, category), 'Audience' (Who buys this, and why they care), 'Strategy' (The one thing the image must say), 'Brand' (Palette, typography, voice), 'References' (Competitor visuals + guardrails), and 'Surfaces' (Where these will live). The 'Brand' card is expanded, showing a color palette with two colors: #8ABABA (36%) and #FFFFFF (18%), each with a hex picker and a usage ratio slider. Below the palette is a 'Typography' section with a text input field containing 'Bebas Neue (display) + Inter (body)'. The 'Voice' section is also expanded, showing 'Voice — opposites' with a table of X-not-Y pairs: punny not slapstick, rebellious not edgy, and confident not hypey. There are also buttons to 'Add colour' and 'Add opposite', and a row of preset chips: confident not hypey, playful not slapstick, expert not clinical, warm not saccharine, rebellious not edgy, minimalist not cold, and optimistic not naive. The 'References' and 'Surfaces' sections are partially visible at the bottom.

FIG 1.2 Brand and References sections. Palette uses hex picker + usage-ratio sliders. Voice opposites are entered as X-not-Y pairs. Competitor refs accept URL paste, file upload, or brand-name search.

02

Step by step walkthrough

Six expanding cards on a single page. Each step has one job, an explicit human / AI split, and a live activity ticker so the user always sees what is happening.

STEP 1

Brief

HUMAN

Fills the six sections, or pastes a URL / brand name into the auto-fill bar and supervises.

AI

Seeds category-aware preset chips. On auto-fill, scrapes the URL and drafts every field.

DONE?

Six sections submitted · palette has a primary hex · at least one competitor ref resolves.

Competitor style report

HUMAN	Pins / unpins competitor visuals, edits any extracted token if needed.
AI	5-strategy scrape chain (og:image / JSON-LD / Twitter card / scored img / Playwright). Then a vision call producing a structured StyleReport with evidence array.
DONE?	3+ palette swatches with hex / role / ratio · every token cites <code>evidenceImageIdx</code> · no floating claims.

FIG 2.1

Step 2 · Competitor style report. Live competitor visuals on the left, extracted palette / lighting / composition / audience signal / props / copy patterns / negative patterns on the right. Evidence array at the bottom ties each claim to an image index.

Strategic angles

HUMAN	Picks 3 of 5 angles, enforced across at least 2 trifecta families.
AI	gpt-5.4 proposes 5 contextual angles from the controlled vocabulary, each with rationale + whitespace claim + confidence score.
DONE?	5 proposals returned · user has picked 3 spanning ≥ 2 trifecta families (Rational / Emotional / Aspirational / Social).

Strategic Angles
Five contextual angles. You pick three that span the trifecta.

AI proposes five strategic angles. Pick three that span at least two trifecta families.
Re-propose

Connect ChatGPT first (top-right Settings).

Picked 3/3 · 3 family/ies
Aspirational
Emotional
Rational

Aspirational

OWN YOUR CRAZY

Bebas Neue · Inter

Why this fits: Souled Store owns the clean studio Friends frame. The whitespace is a rebel-youth poster aesthetic — Bewakoof yellow on inky black, hot stickers, the tee styled like a band tee.

Whitespace: Competitors all use studio softbox catalog framing. Aspirational treats the tee like a poster you would put on a wall.

confidence
88%

Emotional

PIVOT. PIVOT! PIVOT!!

Bebas Neue · Inter

Why this fits: Friends is a comfort-rewatch brand. An emotional concept frames the tee as the artefact you wear when you finally get the joke. Use a warm, in-bedroom moment.

Whitespace: Competitors stay neutral catalog. Emotional moves to a real-feel in-room moment.

confidence
82%

Rational

OFFICIALLY LICENSED. OVERSIZED.

Inter · Inter

Why this fits: For Amazon A+, the rational concept calls out the proof points: officially licensed, 240gsm cotton, oversized drop fit. Yellow callouts on black.

Whitespace: Competitors hide spec callouts. Rational stacks them visibly for marketplace conversion.

confidence
79%

Social-Proof

WORN BY THE PEOPLE WHO GOT IT ...

Inter · Inter

Why this fits: Wear-and-tag UGC frame. The tee modelled by a real customer at a college canteen, framed as a screenshot of an Instagram story with a quote tag.

Whitespace: Competitors use polished studio shots. Social-proof leans into Bewakoof IRL community posts.

confidence
71%

Scarcity

DROP 014 · PIVOT

Bebas Neue · JetBrains Mono

Why this fits: Frame the tee as a numbered drop. Stamp date, drop number, run size on the image. Reads like a sneaker drop, not a t-shirt SKU.

Whitespace: Competitors never frame teespeed as a drop. Scarcity borrows the streetwear release language.

confidence
68%

Continue to Step 4 →

FIG 3.1

Step 3 · Five contextual angles. Picked: Aspirational (rebel-poster), Emotional (rewatch moment), Rational (Amazon A+ infographic). Three trifecta families. Picker refuses to advance unless the spread is real.

CONFLUENCER CREATIVE COCKPIT · TEST RUN V1

Page 6 / 16

Concept briefs

HUMAN	Reviews each brief. Optionally hits per-section regen with a free-text nudge.
AI	3 parallel gpt-5.4 calls, one per angle. Each returns the same 6 spec fields + 5 tool-specific prompts + negative prompt. Quality gate scans for palette overlap, mandatory presence, and do-not-include hits.
DONE?	All 6 spec fields populated · quality gate passes ($\Delta E < 20$ against brand hex, every mandatory present, zero do-not-include items in the prompts, shot recipe matches angle family).

FIG 4.1 Step 4 · Three concept briefs expanded. Theme statement, color story with ratios, typography pairing, shot recipe, headline + subhead + CTA, mandatories checklist, and five tool-specific prompts per concept.

Image generation (optional)

- HUMAN

Skips, or supplies a BYO image-gen key.
- AI

Pass-through in v1. The prompts in Step 6 are the deliverable; user pastes them into Nano Banana / Flux Kontext / Ideogram externally.
- DONE?

Every requested surface yields either a rendered image or a logged failure with a reason.

STEP 6

Prompt deck export

- HUMAN

Copies any prompt · downloads the bundled PDF.
- AI

Rule-based assembly. One card per concept × surface using the auto-recommended tool per shot type. Toggle "Show all tool variants" expands to all 5 tools per card.
- DONE?

PDF renders cover + brief + style report + 3 concept briefs + prompt deck with no missing assets.

FIG 6.1 Step 6 · Prompt deck. Vertical scroll, one card per concept × surface, copy button + open-in-tool button per card, Download PDF top-right.

Each brief declares the same six spec fields. A designer or an image-gen AI should be able to execute these without guessing.

CONCEPT 01 · ASPIRATIONAL

A Friends tee shot like a band poster, not a catalog.

Strategic rationale. Souled Store and Snitch both lean catalog-soft. Bewakoof has white-space in poster culture: rebel youth, sticker layout, hot yellow on inky black. This concept treats the tee like a wall artefact you would tear off a Bombay Local pillar, then hangs the licensed Friends IP from it without apologising.

 #FFCC00	primary 55%	 #0A0A0A	background 35%	 #FFFFFF	accent 10%
TYPOGRAPHY	Bebas Neue (display) + Inter (body)				
SHOT TYPE	hero				
LIGHTING	hard top key + black rim, deep shadow, no fill — gig poster contrast				
COMPOSITION	centred tee at 70% height, top-third bold headline, sticker artefacts at bottom-third				
LENS	50mm prime, slight wide framing for poster feel				
SETTING	inky black backdrop with a slight matte texture, Bombay-poster sticker overlays				
HEADLINE	OWN YOUR CRAZY — Friends Pivot · Oversized · Drop 014				
CTA	GRAB THE DROP				
MANDATORIES	Bewakoof logo bottom-right ✓ A+ safe zones ✓				

FLUX KONTEXT

Bewakoof yellow Friends Pivot oversized cotton t-shirt centred on backdrop. inky black matte-textured poster backdrop with paste-up sticker scraps bottom-third. hard top key light + black rim, deep shadow, no fill, gig poster contrast. centred tee at 70% frame height, headline reserve top-third, brand logo lockup bottom-right. colour palette anchored at #FFCC00 (60%) and #0A0A0A (30%), accent #FFFFFF (10%). 1:1 aspect ratio. Mandatory: Bewakoof logo bottom-right + A+ safe zones respected. Negative: no clean studio white-bg, no mannequin, no plastic mockup, no corporate stock model

The tee in its natural habitat: a Sunday afternoon rewatch.

Strategic rationale. Friends is comfort merchandise. An emotional concept frames the tee as the artefact you reach for when you finally get the joke. Warm beige room, late-afternoon window light, the tee draped on a chair next to a half-drunk coffee. Reads like a rewatch ritual, not a catalog page.

	#F4E1B4 background 55%		#FFCC00 accent 25%		#3D2F1F neutral 20%
TYPOGRAPHY	Bebas Neue (display) + Inter (body)				
SHOT TYPE	lifestyle				
LIGHTING	late golden-hour window light, soft directional, warm CT shift				
COMPOSITION	tee draped on a wooden chair in left-third, coffee mug + remote in foreground				
LENS	35mm wide, shallow depth at foreground objects				
SETTING	beige plaster wall with soft TV-glow rim from off-frame right				
HEADLINE	PIVOT. PIVOT! PIVOT!! — For the rewatch, the in-jokes, and the Sunday couches.				
CTA	WEAR THE REWATCH				
MANDATORIES	Bewakoof logo bottom-right ✓ A+ safe zones ✓				

FLUX KONTEXT

Bewakoof yellow Friends Pivot oversized tee draped on a wooden chair, soft rattan side table foreground. beige plaster wall living room corner, half-drunk coffee mug and tv remote on side table, soft TV glow from off-frame right. late golden-hour window light, soft directional, warm CT shift, gentle rim. tee in left-third, foreground objects bottom-right, 4:5 vertical reserve for headline top. #F4E1B4 background (55%) with #FFCC00 tee accent (25%) and #3D2F1F warm neutrals (20%). 4:5 aspect ratio. Mandatory: Bewakoof logo bottom-right + A+ safe zones respected. Negative: no clean studio white-bg, no mannequin, no plastic mockup, no corporate stock model

The Amazon A+ panel that converts the licence-aware buyer.

Strategic rationale. Marketplace buyers do not get rewatch jokes — they get spec tags. This concept stacks the proof points: officially licensed Friends IP, 240gsm cotton, oversized drop fit, machine wash safe. Yellow callouts on black, every claim with an icon. Built for Amazon A+ panel placement.

#0A0A0A background 60%	#FFCC00 primary 30%	#FFFFFF accent 10%
TYPOGRAPHY	Inter (display + body, marketplace-safe)	
SHOT TYPE	infographic	
LIGHTING	even softbox, flat reveal, no shadow drama — spec-shoot lighting	
COMPOSITION	tee centred at 55%, four yellow icon-callout chips at the four corners	
LENS	85mm product macro, slight compression	
SETTING	pure #0A0A0A backdrop, no texture, marketplace-safe	
HEADLINE	OFFICIALLY LICENSED. OVERSIZED. UNDER ₹600. — 240gsm cotton · Drop fit · Machine wash safe	
CTA	ADD TO CART	
MANDATORIES	Bewakoof logo bottom-right ✓ A+ safe zones ✓	

IDEOGRAM V3

Infographic. Subject: tee centred. Setting: pure #0A0A0A backdrop. Lighting: even softbox flat reveal. Composition: tee at 55%, four corner callouts. Type: Inter headline "OFFICIALLY LICENSED. OVERSIZED. UNDER ₹600." top + four short icon-callout chips. Colour: #0A0A0A 60 / #FFCC00 30 / #FFFFFF 10. Aspect 1:1. Negatives: white-bg, mannequin, plastic mockup, corporate stock model, lifestyle.

The deck assembles one card per concept × surface using the auto-recommended image-gen tool per shot type. For this brief: three concepts × three surfaces = nine cards. All prompts are copy-and-paste ready.

Concept 01 · Aspirational hero

Flux Kontext

1:1

4:5

9:16

Hard-light gig-poster aesthetic. Inky black backdrop, paste-up sticker scraps, hot yellow tee. Headline "OWN YOUR CRAZY" in tall Bebas top-third.

Concept 02 · Emotional lifestyle

Flux Kontext

1:1

4:5

9:16

Rewatch corner. Beige plaster wall, golden-hour window light, tee draped on wooden chair, coffee mug + remote in foreground. Headline "PIVOT. PIVOT! PIVOT!!"

Concept 03 · Rational infographic

Ideogram v3

1:1

4:5

9:16

Amazon A+ panel. Pure black backdrop, tee centred, four yellow icon-callout chips at the corners. Headline "OFFICIALLY LICENSED. OVERSIZED. UNDER ₹600."

System-generated PDF

/api/pdf/<id>

The same deck plus brief, style report, and three concept briefs is bundled into a single downloadable PDF in one click from Step 6 in the live app.

05

Generated image prompts, ready to run

The prompts above were lifted into Nano Banana Pro and Flux Kontext as a sanity check. Three things were true under load.

Concept 1 · Aspirational hero lands first time.

Flux Kontext renders the yellow-on-black gig-poster aesthetic cleanly when given a real product photo as the conditioning image. No regen needed for the Amazon 1:1.

Concept 3 · Rational infographic is best run on Ideogram.

The legibility of the four corner callouts in tall Inter is the differentiator versus Flux, which still wobbles on short on-image text under 12pt equivalent. Route by shot type in Step 6.

Concept 2 · Emotional lifestyle needs a hand-pick.

The room-corner moment is the right vibe but the AI occasionally hallucinates a different chair or a different tee colour. The auto-fix loop helps but a human pick across 3-4 candidates is faster than auto-regen.

✓ What worked

Trifecta enforcement on the angle picker.

The single highest-signal mechanism in the cockpit. First time I ran the system with no enforcement, gpt-5.4 happily proposed three Aspirational angles in different palettes and called them different. The picker refusing to advance unless ≥ 2 trifecta families are picked changed the output meaningfully.

Evidence array on the StyleReport schema.

Forcing the LLM to ground every claim to a specific image index killed the "competitors use heavy grain" hallucinations almost overnight. No image, no claim.

ChatGPT auth as the default zero-cost path.

Anyone with a Plus subscription runs this for free. The Codex endpoint streams cleanly. The most important architectural decision in the whole submission.

Surfacing AI activity in a live ticker.

The user sees the scrape chain trying og:image, then JSON-LD, then a Twitter card fallback. Transparency is what makes the system feel real instead of magical.

⚠️ What did not work first try

The OAuth poll endpoint URL was wrong.

First version polled `/api/accounts/deviceauth/poll` ; the correct endpoint is `/api/accounts/deviceauth/token` . Symptom: user entered the code on `auth.openai.com` and the cockpit never noticed. Fix was one line.

The provider modal was clipped off-screen.

Sticky header uses `backdrop-filter: blur` , which creates a new containing block, so `fixed inset-0` was relative to the header, not the viewport. Fix: render the modal in a React portal to `document.body` .

The activity log left a stale "thinking" spinner after the run finished.

The `thinking` event was emitted at `0s` before the API call started, and stayed in the log forever. Fix: ticker hides any `thinking` event whose `requestId` has been superseded by a later event.

Auto-fill button took too long to ship.

First brief form was technically complete but felt like a tax. Adding "paste a URL or type a brand name and the cockpit fills the rest" was the change that stopped first-time bouncing.

🔄 What I would iterate

Vision on Steps 2 and 4.

Today the style extractor reads page metadata + competitor URL strings and uses gpt-5.4's training knowledge of those brands. Adding a vision call that actually looks at the fetched competitor images would tighten palette extraction for unknown brands. Route this leg to a BYO Gemini or Anthropic key.

Per-image regen in Step 5 with explicit edit-instructions.

Today Step 5 is a pass-through. Next iteration takes the Step 4 prompt + an uploaded reference image, runs Flux Kontext with a small inpaint mask, and lets the user "remove the chair" or "make the headline bigger" without rewriting the whole prompt.

A second model in parallel for cross-validation.

Run Claude 4.7 in parallel with gpt-5.4 on the concept brief stage. If models agree, ship. If they disagree, surface both for human pick. Cheap insurance against single-model bias.

Approve-and-lock gate per step.

Today the user can keep regenerating downstream artefacts even after accepting Step 2. A lock chip would make the human gate explicit and cut wasted ChatGPT calls.

One subscription, no designer in the loop. *A brand ships an Amazon A+ panel set or a Meta dynamic-creative batch on the same Tuesday the brief lands.*
